Uri-Fresh

Bio-enhanced Urinal Screen

High Performance | Sustained Fragrance | Microbial preparation

A bio-enhanced urinal screen formulated with a microbial preparation for effective odour control, high splash reduction, and a sustained fragrance experience — engineered for demanding commercial washrooms with an improved end-of-life profile.

About Uri-Fresh

The Enviroplus Uri-fresh Urinal Pad is a next-generation bio-enhanced urinal screen built for consistent, professional washroom performance. Combining microbial odour-control technology with an advanced needle-design splash-reduction system and sustained fragrance release, it delivers a noticeably cleaner and fresher washroom throughout its full 30–35 day service life.

At the heart of the Uri-fresh is its microbial preparation — targeting the root causes of malodour including ammonia and sulphide compounds at the source, rather than simply masking them with fragrance. The result is lasting freshness that holds up in even the highest-traffic environments.

The Uri-fresh is also engineered with an improved end-of-life profile. Independent laboratory testing conducted under ASTM D5511-18 confirmed measurable biodegradation activity, demonstrating that the material is designed to break down under anaerobic waste-processing conditions — unlike conventional urinal pads that persist in the waste stream indefinitely.

Suitable for both conventional and waterless urinals, the Enviroplus Uri-fresh Urinal Pad is the professional choice for facility managers and hygiene service providers who demand performance, freshness, and environmental responsibility in a single product.

Key features

- Microbial preparation formulated to target odour at the source, including ammonia and sulphide compounds
- High-performance needle design delivering superior splash reduction
- Sustained fragrance release for a consistently fresh washroom environment
- 30–35 day effective service life
- Bio-enhanced construction engineered to support biodegradation under anaerobic waste-processing conditions*
- Suitable for conventional and waterless urinals
- Independently tested to ASTM D5511-18

*11.95% biodegradation after 45 days verified, under test conditions to ASTM D5511-18 (high-solids anaerobic digestion conditions). Results may vary in other disposal environments and do not represent typical landfill conditions.
